

## Pet Dent long-handled toothbrush and Pet Dent Finger-brush:

The Pet Dent long-handled toothbrush is especially designed for Large breed dogs (when you do not want to get your hands too close to their teeth) or for smaller breed dogs and cats (with a mouth too small for your fingers to fit). This unique “double ended” toothbrush with its special long handle will reach far back in the dog's mouth and makes reaching difficult areas easy. The Pet Dent Finger brush fits snugly onto your index finger is suitable for medium breed dogs and dogs that are comfortable with you sticking your finger inside their mouth. Brushing your pets teeth is the best way to keep their mouths healthy. Use a Pet Dent Toothbrush along with a pet toothpaste.

Start to brush your puppy or kitten's teeth daily from an early age (+- 2months ), this will get your pet accustomed to the routine. You should concentrate on brushing the outside of your pets teeth, using an up and down motion rather than a sideways motion. Clean the brush after each use by rinsing well in water.
