

“Spin the bottle” food dispenser

This cool idea can be used for dogs, cats, parrots and small fluffies – just build it according to the size and strength of your pet! Use this to feed your pet part of a meal or to dispense treats. Use under supervision.

You will need:

Wooden board for the base.

Some plastic bottles of appropriate size for your pet to spin.

Dowel rods to hold the bottles.

Screws/nails.

Drill and drill bits.

Dry pellets or treats.

Build a stable base suitable for the size and strength of your pet – make the sides high enough that the bottles can spin on the rods near the pets’ eye-level.

Drill holes in the sides of the stand and in the bottles (approximately 1/3rd to half of the way down the bottle) to slide the dowel rod through.

Place 1-3 bottles on the dowel rod and fit the dowel rod into the stand.

Place dry treats or pellets in the bottles.

Please ensure all materials used are safe for the pet you will use the toy for.

You can make a small stand for smaller pets using weighted shoeboxes instead of a wooden base.

To make this toy easier for beginners, make the holes in the bottles half way down the bottle so it spins and releases treats more easily. Make the holes higher up for more of a challenge!
